misc stuff I will find another place for
passwords

/etc/passwd is a bit long in the tooth. /etc/master.passwd is where the action is now kept. if you look at that and need to, for example, change the login shell you need to run pwd_mkdb /etc/master.passwd afterwords

Edit these files to contain the following. In .bashrc put these statements.

.bashrc - Bourne Again Shell configuration file # for interactive shells. # file permissions: rwxr-xr-x umask 022 BLOCKSIZE=K; export BLOCKSIZE EDITOR=pico; export EDITOR PAGER=/usr/bin/more; export PAGER

some useful aliases alias h='fc -l' alias j=jobs alias m=$PAGER alias ll='ls -laFo' alias ls='ls -la -G' alias g='egrep -i' alias ll='ls -laFo' alias ls='ls -la -G' alias g='egrep -i'

set prompt PS1="u@ w $> "

Now for .bash_profile put the following statements:

.bash_profile - Bourne Again Shell configuration file # for login shells. PATH=/sbin:/bin:/usr/sbin:/usr/bin:/usr/ga # file permissions: rwxr-xr-x umask 022 BLOCKSIZE=K; export BLOCKSIZE EDITOR=pico; export EDITOR PAGER=/usr/bin/more; export PAGER

set ENV to a file invoked each time bash is started # for interactive use. ENV=$HOME/.shrc; export ENV # some useful aliases alias h='fc -l' alias j=jobs alias m=$PAGER alias ll='ls -laFo' alias ls='ls -la -G' alias g='egrep -i'

set prompt PS1="u@w $> "
